

Ultrasound Speech Therapy

Summer Sessions

Ultrasound speech therapy is a new, noninvasive method that helps children and adults who still have trouble with certain speech sounds, most commonly “r” and “s”. This state-of-the-art speech therapy uses ultrasound to visualize tongue position and offers immediate feedback to the client. Consistent, intensive therapy in 8-session segments may lead to faster remediation of the sound error.

- **Age Group: 8 years old to adult**
- **Session Length: 45 minutes**
- **4 daily sessions over 2 weeks**
- **No evaluation needed**
